

Jeavons Eurotir

The Company

As a transport specialist with over 20 years experience in the industry, Jeavons Eurotir Ltd recognises the need to constantly seek out and implement the latest developments in training and technologies. Such advancements result in the company being able to continually improve and expand whilst facilitating the organisation to operate with greater efficiency. Consequently, Jeavons Eurotir were intrigued at what role Clear mXt™ could have in improving fuel efficiency and did not hesitate in agreeing to trial the product especially as they could do so on a risk-free basis.

The Trial

Jeavons Eurotir selected a number of vehicles which performed a variety of different work and collected 'before' data outlining their average M.P.G. figures. As Jeavons Eurotir already used a number of highly effective methods of monitoring fuel consumption such as raw data, on-board computers and the latest satellite technologies, the figures were collated with great precision. There are a number of factors which influence fuel consumption, highlighting the reason why every care was made to ensure accurate measurements were taken and include such factors in the analysis of the results.

The Results

Average Increase

13.67 %

After 6 months

After experiencing such positive results with using Clear mXt™, Jeavons Eurotir are subsequently committed to using it long term and have continued to see the benefits. To date, Jeavons Eurotir calculate that the savings generated from using Clear mXt™ are approximately **£1,200 per truck, a saving which has gone straight to their bottom line, providing a well earned boost of doubling their profits!**

“This product definitely works, we have made significant savings since the beginning of the trial and are now dedicated to using Clear mXt™ long term”
